Re: Water meter replacement project

Account Number:

Service Location:

Dear Resident:

The Jericho Water District will be conducting a pilot program designed to evaluate the latest technology currently being offered regarding remote water meter reading capabilities. There will be no cost to the residents. These new meters will have the capability to monitor for leaks along with increased accuracy for billing.

The Jericho Water District has contracted with SAKS Metering to install the new meters. SAKS Metering personnel will have photo identification, car signs and company uniforms. SAKS Metering will contact you by phone or leave a door hanger to schedule an appointment. Typically, the upgrade of your water meter should take no more than an hour to complete. While the meter is being changed out, you will experience temporary disruption in water service.

Should you have any questions or concerns regarding this project, don't hesitate to contact our office at (516) 921-8280 or SAKS Metering at (516) 453-2922. We also urge you to visit the contractor's website at www.saksmetering.com to view a FAQ video that can provide answers to many questions you may have.

We thank you in advance for your cooperation.

Sincerely,
Jericho Water District
Board of Commissioners

Peter F. Logan
Superintendent
